

# Important Instructions for Electronic Proceedings in USB Drive

## Open Cross-Documents Links In a New Window:

If you want to open the papers you read in another window to keep the Table of Content window open, please do NOT check the Open Cross-Doc Links in Same Window. This can be done by going to Edit > Preferences. These options will be under General or Documents depending on your version of Acrobat. Leaving this preference unchecked will keep the original window open and a new window will open to display the paper you want to read.

## Edit > Preferences > Document

## Edit > Preferences > General
